

Propane is a safe, green, renewable, affordable energy produced right here in the U.S.

Here are some disadvantages of Natural Gas.

- You are charged monthly meter fees of \$15.00/month minimum at residential locations regardless if you only use natural gas during the cool weather months
- Customer is charged additional fees such as fuel adjustment charges, energy efficiency program charges, or infrastructure replacement charges on top of monthly meter fees
- It takes twice as much natural gas to equal the same BTU capacity as Propane & natural gas companies inject propane into natural gas to equalize pressure in cool weather months
- Many interruptions in service can occur within the Natural Gas pipeline system
- Natural Gas systems require a minimum of a 2in gas line whereas propane may require less saving initial building costs
- No service technicians are available from natural gas supplier to work on appliances when out of service or order
- Prices quoted now are just introductory and can have the potential to increase depending on market volatility

Listed below are advantages of using Gasco Energy Supply, LLC of Eldon & Camdenton for your home energy & Propane needs are:
